Why have my seed points gone up?

For each seed list during the season, your seed points are calculated as the minimum of:
- last year's EOS points (the “basic points”)
- the average of the best two results in the season
- the average of the best single result and the basic points
- single best result in season plus 20% (minimum load 10.00)

This is different for the EOS list, where the calculation works out the minimum of:
- basic points plus 20% (minimum load 10.00, or 30.00 if no results in season)
- the average of the best two results in the season
- single best result in season plus 20% (minimum load 10.00)

Here you can see that the option to simply ‘copy forward’ the basic points from last year no longer figures in the equation. Thus if you haven’t managed to get any results in the season that really improve on last year’s points, you can find your points go up instead of down.

The nitty-gritty of the rules are in BACR Book III, article 11.
